1. Troop Movements along the roads and training grounds from Doeberitz kept being intensive between 10 and 20 February. On 10 February, 8 T-34 tanks moved out of the barracks installation west of Olympisches Dorf (2065) and headed for the training grounds south of Hamburger Chaussee. During the following days, tanks, 76.2-mm guns, heavy mortars and various troops with heavy machine guns were seen on the way to the training grounds. On 13 February, 4 armored personnel carriers and 4 armored scout cars of model BA-64 passed through Doeberitz toward a westerly direction, coming from the direction of the Loewen Kaserne (2063). Six T-34 tanks were en route to the training grounds from the barracks installation west of Olympisches Dorf (2067) on 15 and 17 February.¹ After 24 x 76.2-mm field guns from Olympisches Dorf had been loaded at Doeberitz railroad station on 5 January, only 48 x 76.2-mm guns were counted in two sheds near the pond in the barracks installation concerned on 13 February. The two other sheds, which had housed the guns had not yet been reoccupied. 2

2. Between 19 and 27 February, the Loewen Kaserne and Adler Kaserne (2063) in Doeberitz were still occupied to capacity. Soldiers observed wore red-bordered black and black-bordered black epaulets, including some with tank and artillery insignia. The 6 x 122-mm field howitzers which had been identified in an open shed along the west side of the Adler Kaserne since January 1954 were still there on 27 February. As only part of the sheds could be overlooked, it is possible that still more guns were parked there. Trucks moved out of the Loewen Kaserne on 24 February. They presumably belonged to engineer unit Popof. Trucks driven by soldiers with red-bordered black epaulets also belonged to the Loewen Kaserne. A column of 3 ZIS-3 field guns of 76.2-mm moved out of the barracks installation west of Olympisches Dorf in the morning of 27 February. Heavy noise of tanks was heard from the approach roads to the installation during the morning and evening hours. It presumably resulted from tanks which went to, or returned from, daily training in the training area. The noise of tank tracks was also daily heard from the Neue Lager (2061). 1
